**Custom Tabs**

You can create new custom tabs to extend Salesforce functionality or to build new application functionality.

Custom Object tabs look and behave like the standard tabs provided with Salesforce. Web tabs allow you to embed external web applications and content within the Salesforce window. Visualforce tabs allow you to embed Visualforce pages. Lightning Component tabs allow you to add Lightning components to the navigation menu in Lightning Experience and the mobile app. Lightning Page tabs allow you to add Lightning Pages to Lightning Experience and the mobile app.

The left sidebar lists various object types: Details, Fields & Relationships, Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Record Types, Related Lookup Filters, Restriction Rules, Scoping Rules, Triggers, and Flow Triggers. The 'Fields & Relationships' tab is selected. On the right, a list of field types is shown with their descriptions. The 'Email' field type is highlighted with a mouse cursor. The description for the Email field states: 'Allows users to enter an email address, which is validated to ensure proper format. If this field is specified for a contact or lead, users can choose the address when clicking Send an Email. Note that custom email addresses cannot be used for mass emails.' Other field types listed include Currency, Date, Date/Time, Text, Geolocation, Number, Percent, Phone, Picklist, Picklist (Multi-Select), Text, Text Area, Text Area (Long), Text Area (Rich), Text (Encrypted), Time, and URL.

The screenshot shows the 'New Custom Field' creation page for the 'Department' object. The left sidebar is identical to the previous screenshot. The main area is titled 'Step 2. Enter the details'. It contains fields for 'Field Label' (set to 'Dept\_mail'), 'Field Name' (set to 'Dept\_mail'), 'Description' (empty), and 'Help Text' (empty). Under the 'Required' section, there are three checkboxes: 'Always require a value in this field in order to save a record' (unchecked), 'Do not allow duplicate values' (unchecked), and 'Set this field as the unique record identifier from an external system' (unchecked). Under 'Auto add to custom report type', there is a checkbox 'Add this field to existing custom report types that contain this entity' which is checked. At the bottom, there is a 'Default Value' section with a 'Show Formula Editor' button. A note below the formula editor explains the syntax for formula fields. The top right of the page shows 'Step 2 of 4' and navigation buttons for 'Previous', 'Next', and 'Cancel'.

Specify the type of information that the custom field will contain.

**Data Type**

None Selected | Select one of the data types below.

Auto Number | A system-generated sequence number that uses a display format you define. The number is automatically incremented for each new record.

Formula | A read-only field that derives its value from a formula expression you define. The formula field is updated when any of the source fields change.

Roll-Up Summary | A read-only field that displays the sum, minimum, or maximum value of a field in a related list or the record count of all records listed in a related list.

Lookup Relationship | Creates a relationship that links this object to another object. The relationship field allows users to click on a lookup icon to select a value from a popup list. The other object is the source of the values in the list.

Master-Detail Relationship | Creates a special type of parent-child relationship between this object (the child, or "detail") and another object (the parent, or "master") where:

- The relationship field is required on all detail records.
- The ownership and sharing of a detail record are determined by the master record.
- When a user deletes the master record, all detail records are deleted.
- You can create rollup summary fields on the master record to summarize the detail records.

The relationship field allows users to click on a lookup icon to select a value from a popup list. The master object is the source of the values in the list.

External Lookup Relationship | Creates a relationship that links this object to an external object whose data is stored outside the Salesforce org.
